Modern C++

- Price:** € 2,400 excl. VAT *
- Duration:** 4 days in a period of 2 weeks
- Contact:** training@hightechinstitute.nl, +31 85 401 3600
- Score:** 8.6 ★★★★★☆

Intro

The training Modern C++ is targeted at the way this language is used today. The curriculum covers the whole area of C++ from basic needs up to advanced designs. There is an emphasis on applying a modern style, resulting in code that is correct as well as clear. Practice forms an important part of the training. Exercises will cover all techniques to make sure participants have understood the theory and are able to apply it in practice.

For in-house the Modern C++-training can be adapted to your situation and special needs.

Intended for

Software developers who have a basic experience in programming, not necessarily in C or C++.

Program

The program covers the most important elements of C++ that software developers need to write structured and complete programs. Among others:

- Object-oriented programming
- Data types
- Constant correctness
- Templates
- The Standard Template Library
- Containers
- Algorithms
- Exception handling
- Operator overloading
- Automatic memory management and smart pointers

Methods

Both lecturers & exercises.

Trainers

Jeroen Lammertink

Certification

Participants acquire a High Tech Institute certificate for attending this training.
