Intro

User interfaces are becoming more important every day and users expect a user experience as nice as their high performance smart phones. During our one day training UX for Software Engineers we equip you with the basic knowledge about good user interface design. Not only will you learn about the fundamentals, but also you will gain hands on experience.

Objective

After the training you will be able to create well designed, functioning user interfaces.

Intended for

Software engineers who develop applications with user interfaces and have to interact with designers. They will be able to effectively work together with designers to create user interfaces that are implementable with the technology they are using.

For software engineers who have to interact with designers this training on the foundations of user experience is an important addition to their skill set.

Program

The programme covers:

- Introduction on UX Design
- Return on investment of UX
- What is the core of the UX Design job?
- Core of UX: interaction design and graphics design
- Specific UX Patterns
- Designing a multiple language user interface and tips & tricks that will save you lots of head aches
- What software to use for UX?
- Design cases workshop
- Testing your application with real users!

Methods

Both lecturers & exercises.

Certification

After attending, participants acquire a High Tech Institute certificate.
